

## Workflow Upgrade - Apogee v11

On Monday 3rd June we will be upgrading to the very latest version of AGFA's Apogee Production Centre.

Apogee v11 includes Adobe PDF Print Engine v5 which supports the new **PDF 2.0** standard. This enables us to continue processing the very latest designs within PDFs, effectively and correctly.

In addition to the '*behind-the-scenes data processing*' upgrades, there are some new features for our WebApproval users:

- Correct dimensions for spine proofs
- Spread view for reviewing outer cover sections and also throw-outs
- Rulers
- Guides
- Measure facility

To enable us to upgrade, there will be a little downtime on Monday 3rd June. Once the upgrade is complete, you will be able to connect as you currently do - same url, same login information.

If you have any questions, please do not hesitate to contact the Prepress Team or your Account Handler.
